### **RedPrairie Looks to the Clouds**

RedPrairie, the supplier of supply chain execution systems, will beat the show fresh from launching a series of pre-integrated application modules for NetSuite, the vendor of cloud computing business management software suites. Integration components will be provided across several RedPrairie solutions. "While we have successfully delivered our solutions via hosted and SaaS models for several years, we felt pre-integrated application modules on NetSuite's Suite Cloud would provide further value for our customers," says Jim Hoefflin, EVP of products and marketing at RedPrairie. "We believe our integration to NetSuite, provides best-of breed supply chain and store operations capabilities to mid-tier companies that have not been able to justify it through traditional deployment models.
