Add insight to reports by generating narrative commentary from generative AI.

NetSuite Narrative Reporting

NetSuite Narrative Reporting provides a comprehensive solution to simplify the process of creating financial and management reports. Finance and accounting teams can use this solution to collaboratively author, review, publish, and distribute financial and management reports to internal and external stakeholders. Data integrations with NetSuite ERP and other source systems provide the building blocks for the reports. With NetSuite Narrative Reporting, you can combine data and textual insights to create detailed and contextual reports. Gain confidence in your reports with direct access to a single source of accurate data for all financial, management, and statutory reporting. Easily create AI-powered narrative, explanations, and visuals that bring financial and operational data to life, faster and with greater confidence.

Key Benefits

- **Accurate and Consistent Data.** Automate data collection to ensure accurate and consistent reporting.
- **Faster Report Creation.** Reduce report cycle times with a single interface for report creation, management, and distribution.
- **Deeper Context and Insight.** Enhance narratives with AI-generated commentary and variance explanations that support better decision-making and storytelling.

AI-Powered Narrative Creation

AI can automatically create written summaries in your reports that include highlighting key exceptions, explaining the main drivers behind those exceptions, and comparing current results with prior periods to provide context.

Collaborate Securely

Collaborate securely with multiauthor collaboration, which allows subject matter experts across your organization to contribute to specific report sections based on their role and subsequent permissions. Monitor report progress and approvals on mobile or web with comprehensive audit trails, and maintain version control with everyone working from the same document. Encourage collaboration during review cycles with threaded discussions that let people review and comment on their respective sections, while those with the requisite access can use conversational threads to share general feedback on the report. Boost efficiency by reusing common content from previous reports with report rollovers and centrally maintaining dates, text, and data.

Publish and Distribute Reports

Publish and distribute reports efficiently by creating report books that group management or financial reports for executive briefings and other uses. Securely send report content to stakeholders at any point in the report development process through NetSuite Narrative Reporting and use report bursting capabilities to distribute final copies.

Deliver Internal and External Reporting

Satisfy internal and external reporting requirements by fulfilling obligations such as budget books in the public sector and annual reports in the private sector. Generate country-by-country reports (CbCR) in XML-formatted and narrative reporting formats consistent with country-specific regulations.

Task Management

Use the Task Management tool to monitor and manage various accounting and finance tasks, such as collecting and verifying financial data, with role-based workflows, real-time dashboards, and checklists. Receive email notifications and alerts when senior leaders and board members certify critical reports. This tool helps your staff stay organized and prevents bottlenecks by reminding them to create, assign, communicate, and ultimately complete tasks ahead of deadlines.
